

Hearts for Life across the World

WORLD DATABASE FOR PEDIATRIC AND CONGENITAL HEART SURGERY

Every child born anywhere in the world with a congenital heart defect should have access to appropriate medical and surgical care!

WORLD DATABASE COMMITTEE 2020-2021

The World Database Committee comprises a group of individuals that have dedicated their time and effort to the mission of the World Database, both in action and submission of patients. The agenda of the committee, through conference calls and sessions held at WSPCHS meetings, will address and provide input into current database issues, while providing insight into future directions of the database. With increase in the number of requests for data and the analysis for this data for specific QI projects, the committee will also serve to review and approve such projects.
